Engineered and Made in Germany

Specialist for Valve Actuation

PS Automation GmbH was founded in Bad Dürkheim in 1989.

PS Automation GmbH is an independent company, creating value through close relationships with

→customers and suppliers.

Our management looks back on more than 40 years of experience in its business.

In order to keep up with competition in the process technology of water, power, chemical and pharmaceutical industries, industrial utilities and ship

building, process plants must run around the clock without compromise.

Compact, modular and reliable

All products are characterized by a compact, modular design with many upgradeable features. They are reliable with a wide range of applications.

If you require unconventional solutions

we can offer you customer tailored modifications and we are constantly developing our products further.

Our company has been successfully active on the market for over 25 years.

We are a global company, built on flexibility, flat hierarchies and good communication resulting in a fast and competent service including production, sales and after sales service.

Quality management according to →DIN EN ISO 9001:2008 goes without saying.

Our staff is highly motivated and expertly trained. Our customers value the seamless communication, the proactive thinking of our employees and the professionalism and quality of our services.

We are experienced in nearly every industry and can ensure that you stay competitive by providing solutions that fit your needs.

Germany as a business location offers many advantages, amongst others specialist technical knowledge from local research institutions, a reliable supplier network and a local workforce familiar with excellent product quality

Engineered and Made in Germany.
„No frills.“

Christian Schmidhuber,
General Manager

We work together with valve manufacturers, plant designers, engineering contractors and end users. We specialize in electric and electronic actuators in order to control and regulate product flows through the valve.

At PS Automation, we develop, pro-

duce and deliver a broad range of actuators for valve automation.

Our core competency is transmission engineering, coupled with state of the art electronic control systems and knowledge of the application possibilities.

By concentrating on these disciplines we are able to offer outstanding value for money as well as short lead times. We also offer product training (inhouse and on site), commissioning, and repairs all tailored to meet the customer requirements.

Depending on their needs, our customers benefit from further offers, e.g. personal training and services →ranging from commissioning to repairs.
